

# Blue Note Pro Series

9V/DC ONLY.  
Battery available

**VOLUME** - Controls the overall Output level

**TONE** - Controls the top end and bite. Works in conjunction with the FAT control

**GUITAR OUTPUT**

**HOT SWITCH** - Up is more gain  
Down is less gain

**GAIN** - Adds slight gain and compression for better feel.

**FAT** - Controls the low mids and overall thickness. Works in conjunction with the treble control

**GUITAR INPUT**

**ON/OFF** - True Bypass switch

**The Blue Note Pro Series** is designed to achieve low gain blues and jazz tones. We feel this is the most transparent OD on the market with perfect EQ. We designed this pedal to not be heard unless you want it to. Match the volume and EQ to unity and the pedal will disappear. Add just a little gain and your dynamics will increase along with the feel. The Tone and Fat controls are interactive so experiment with combinations. When the hot switch is up it will limit the effectiveness of the FAT control since it adds gain and bottom end.
